leaplogic

Automated cloud-native transformation for ETL, data warehouse, and analytics

The freedom of the cloud is on the horizon.

But the path to modernization of ETL, data warehouses, and analytics is challenging.

We change that.

For over 20 years, Impetus has led the way as the expert in digital transformation.

We've handled the challenges – and created a product that accelerates the journey from legacy to modern.

LeapLogic is the only product to automate migration and modernization of any legacy ETL, data warehouse, and analytics system.

LeapLogic automates up to 95% of migration to any cloud environment.

What would take a large team of highly trained engineers months — or even years — now happens up to four times faster.

It's not just easier, it's automatic.

LeapLogic also automates rigorous validation tests and handles orchestration, so you'll reach your destination sooner and avoid business disruption.

And when you do, LeapLogic assists with cloud optimization and capacity planning, ensuring performance of the workloads in your new cloud-native stack.

Choose LeapLogic to take you to the cloud faster, at lower cost and with lower risk.

It's more than the next step.

It's a leap into the future of your business.
